ABSTRACT OF THE DISCLOSURE

A holster for attaching to an leg of a user and holding a hammer in a position which provides complete freedom of movement of hands and feet of the user and which permits the user to remove the hammer with the same hand employed to use the hammer. The holster is made from a rod-like, slender, and elongated material, and includes an attaching portion attaching to the leg of a user and a holding portion extending from the attaching portion and cradling the head of the hammer therein, with the handle of the hammer extending upwardly therefrom, with the claw of the hammer extending replaceably through one side of the holding portion, and with the bell/poll of the hammer extending replaceably through the other side of the holding portion.
